

Item Name: Synergy Soran Phased Pistol

Proposed Rarity: Legendary

Item Description: A curious and easily concealable pistol, the Synergy Soran Phased Pistol consists of a hefty gun-butt with a comparatively diminutive barrel section above the butt and an obvious trigger-guard. Uniquely, when the weapon is brought to a ready-to-fire state, the barrel section will rotate down through ninety degrees into its firing position. Though featuring apparent optics atop the barrel section, the short barrel makes it deadly in close-quarter situations but far less accurate at longer distances.
