

The Battle of Takodana

The objective of this invasion is simple; we must first infiltrate and engage the castle of Maz Kanata, retrieve the droid known as BB-8, destroy any information the Resistance has on the First Order and defend our forces from Resistance fighters, soldiers and any other heavy artillery waiting.

First Order Strengths

- Kylo Ren
- First Order Stormtroopers
- Riot Control Stormtroopers
- TIE/FO Space Superiority Fighters
- Atmospheric Assault Landers
- Upsilon-class Command Shuttle

Resistance Strengths

- Resistance Fighters
- BB-8
- Wookiee Soldiers
- "Traitor"
- Jedi Knights
- Smugglers
- T-70 X-Wing Fighters
- Resistance Troopers

Tactic

The first wave will include Kylo Ren to storm the castle and engage the enemy with a squadron of Stormtroopers at his disposal. Once Kylo and the stormtroopers have secured the castle using a stealth-based infiltration technique, the TIE/FO squadrons will swoop into view of the castle and bombard it with a full frontal assault. The fleet above will drop down the Atmospheric Assault Landers, who will then fire at will at the castle and anyone who tries to escape. The objective is to locate the BB-8 droid, retrieve it from the resistance hands and return to the fleet above. The riot control and stormtroopers will engage all resistance surviving the original bombardment, while Kylo Ren runs a scouting party inside the castle.

The squadrons of ships will use a hit and run tactic. Which is to sweep from a high altitude, descend onto the castle and fire torpedos and blasters. Then once they reached 100 meters from the ground, swoop back up and reload for another wave.

The scouting party consisting of Kylo Ren and the Stormtroopers will engage the castle from the north wall and blow their way inside with controlled c4 explosives. They will storm the corridors and neutralise the threats inside with quick and silent attacks. They will all be given a copy of the blueprints so they can follow the corridors and sweep room by room, while Kylo Ren uses the Force to search for the known Jedi and neutralise the threat.

The Atmospheric Assault Landers will arrive via a capital ship drop, followed by the Upsilon-class command shuttle directly in front of the southern entrance and will proceed to fire their turrets at the main entrance. Using thermal expansion explosive slug rounds, they will target the walls and entrance doors of the castle, preventing the resistance soldiers from escaping the scouting party. While the shuttle will scout around for escaping resistance troopers and pick them off. The shuttle is also responsible for detecting the Resistance squadrons that will be inbound within a two-hour response signal sent from the castle's main communications hub.

Once the Resistance X-Wing fighters are inbound, the TIE/FO squadrons will change their targets to the X-Wings and continue their sweep of hit and run on them. Then the Assault Landers will change target and fire on the X-Wings who will swoop in from the western lakes, and calibrate their trajectory for the fighters.

Once Resistance troopers leave the castle and start to engage the Assault Landers, Stormtroopers will take the front lines and engage the enemy with full support from the armoury and riot control troopers.

Expected Outcome

- Castle destroyed
- BB-8 captured by Kylo Ren
- X-Wing Fighters destroyed
- Smugglers captured for interrogation
- First Order Victory
