Arakyd Miniaturised Blaster Mount

Description:

The Arakyd Miniaturised Blaster Mount was developed from the weapon system carried by the Viper Probot series. Developed in a joint program between Arakyd and Blastech, the weapon mount was designed to be able to be mounted either externally or on a retractable armature. This weapon is currently designed to be mounted on the Arakyd ID9 Seeker Series in a ventral mount, however with some modification it can be fitted to other Arakyd series droids. Blastech are currently working on a version that can be mounted on a universal fitting, so as it can be marketed to other droid manufacturers.
