Item Name: Crystalline Compound Scanner

Item Category: Electronics

Proposed Store: Brotherhood Trading Company

Proposed Rarity: Rare

Item Description:

The Crystalline Compound Scanner was developed by the brilliant minds of the Severian Principate's scientific community. Due to the amount of crystals among the natural resources of many of the planets under the Principate's dominion, they needed a way to better find those resources so that they could be used or sold for profit. With multiple settings included, this scanner is capable of finding many different types of crystals, including the rare kyber crystals known for powering lightsabers, and larger weapons such as the Death Star.
