

Bank of Aliso

A large structure erected in Aliso City, the Bank of Aliso serves as the hub of economic activity on the planet. Not only does it operate as the primary bank of the Clan, with several branches scattered around the planet, but it also serves as a front for Theodorosa "Rosa" Equinario's operations. On the surface, she is running and operating the bank completely legally and above board, but it can also serve as a base of operations and resource, granting Rosa several high-level contacts.

The bank itself is rather large and spacious, designed with a simple utilitarian effectiveness reminiscent of a sleek and modern building that isn't particularly assuming on its own. However, it towers over the other nearby buildings, being much taller than it is long. On the inside, on the other hand, its wealth is much more apparent.

With several floors dedicated to various legal and extralegal activities, it has a state of the art security system and most civilians won't be allowed on the upper floors without expression permission from the bank owner. The bank was originally owned by members of the Willing, but since taking it over, Rosa has rotated most of her own staff into key positions. The bank still is quite functional in its intended purpose, keeping the Plagueian economy running smoothly, but that's exactly what makes it a great front.
