Item Prototype Name: Lancer-class Tenixir r10B Frigate
Item Prototype Rarity: Epic
Item Prototype Cost: 44,999,999.99
Item Prototype Description:
The Lancer-class Tenixir r10B Frigate is a 250-meter long Frigate that is a slightly modified version of the Lancer-class Tenixir r10 Frigate, which itself is a Collective-modified version of the Lancer-class Frigate. This version has highly integrated systems to allow smaller crew complements to effectively utilise it. While both preceding versions were intended for anti-starfighter operations, the r10B has been optimized for piracy. Its hyperdrive has been downgraded in favour of adding speed & maneuverability. Shielding has similarly been downgraded in favour of heavier armour to save energy for this. Several segments of the Frigate have been heavily altered to support ship-to-ship fighting and boarding actions.

Several segments of hull along the length of the ship have been removed and replaced with launch bays, each containing basic boarding craft made from modified escape pods. Several further segments of hull in between these launch bays have been removed and seem to now hold scavenged artillery cannons. These cannons (20 J1 Proton Cannons & 8 Forward mounted self loading artillery cannons) have been fixed in place so can only be aimed by moving the ship into position for a broadside. Half its cargo capacity was sacrificed to this upgrade (50 metric tons).

A further 25 metric tons of cargo capacity has been sacrificed to increase passenger capacity.

The vessel is Hyperdrive capable, has above average maneuverability, speed, and armour but below average shielding.

Armament:
- 28 quad laser turrets
- 20 J1 Proton Cannons (10 on each side of the ships central segment)
- 8 Forward-mounted self-loading artillery cannon (4 on each side of the ships central segment

Complement
- 100 crew for full effectiveness, can be manned by 25 if reliant on heavy droid involvement
- 25 metric tons of cargo
- 60 passengers/troops
