Evaluation of target's psyche:

Patience and intelligence are two of Uji's few virtues. He is a careful planner by nature, and is perfectly comfortable spending years weaving threads just how he wants them. This can make him appear reckless when his well-thought out plans lead to much intended chaos. This slow, cunning approach makes him a good tactician, impressive problem-solver, and careful manipulator. However it can also prevent him from recognizing when a different approach might be better, or from acting on the spur of the moment when it's needed.
