

Item Name: The Backpat (Refused Hand)

Item Category: Equipment. Gear Kit

Proposed Shop: Ornamental Oddments or Utilis Innovations (but Frosty's Chop Shop would be funny)

Proposed Rarity: White, Green, and Blue, depending on sourced droid

Item Description: A helping hand, a third (or fifth!) arm with all the benefits and drawbacks of mechanical construction. It is heavy but reliable, resistant to heat and vulnerable to ionization.

White: Because of the weight, this requires a torso or shoulder harness to balance effectively.

Green: Some extraneous sensors have been removed to lighten this arm, exchanging some durability for the comfort of its user.

Justification: As a part of the submission for the Plag/Tal Feud competition, this is an object that could have been pulled from the derelict Venator-class *Covenant* -- but also is an evergreen concept that can be reskinned with different droid arms and motifs.
