

Artificial Intelligence Central Computer Core

Rarity: Artifact

Cost: 497,000 Credits

A droid brain has been installed on this vessel that can automatically pilot the ship and operate the hyperdrive, without any sentient input, including advanced combat maneuvers and weapon firing beyond what can be expected from an ordinary gunner. This brain goes above and beyond the Piloting, Hyperspace, and Weapons functions of a standard droid brain. The AICCC is able to operate a capital ship without any kind of sentient input. It makes calculations and simulates thousands of battle scenarios in a matter of nanoseconds. Its internal security responds instantly to any intruders. It controls any slaved droid for tasks that it cannot physically perform. The AICCC was considered too dangerous by the creators of it and it was intended to be destroyed. Instead, in its decimated state, it was able to gain partial control of a Venator and crashed it.
