

Item Prototype Name: Porta-deka

Example Item Image:

Item Prototype Proposed Rarity: Legendary

Item Prototype Proposed Cost: 280,000

Item Prototype Description: The Porta-deka is a repurposed droideka with the droid brain removed to allow for a single user to sit inside and operate the former droid as if it were a mech. The porta-deka retains all of its original functions via user operated controls, though using the roll function while in operation is ill-advised due to the high risk of crushing the user and more importantly, damaging the porta-deka.
